BREAK O’DAY COUNCIL – COMMUNITY FOOD ACCESS PROFILE

Introduction & disclaimer – This profile has been developed by the Heart Foundation Tasmania as part of the Healthy Food Access Tasmania Project. The information highlighted in this profile was gathered in 2014. At the time we put it together it was up to date. Sometimes things change and when they do we are happy to update it for you. Also if there is other information you think should also be included please contact us.

Why does access to healthy food matter?
Limited or poor access to healthy food has both health and social consequences. There are many health conditions and diseases which are associated with or caused by a poor diet, as a result of poor economic or physical access to healthy food. These diseases include heart disease, diabetes, some cancers and other health conditions such as overweight and obesity. Reduced access to healthy food can cause poor physical development in children and impact their learning and attendance at school. For adults who have poor access to healthy food it is often very stressful and causes them to be anxious and ashamed. This often also means they avoid social occasions in their communities and with family and which can lead to them becoming socially isolated.

How are the residents of Break O’Day Council doing?
Currently 47.2% of adults living in Break O’Day eat the recommended two pieces of fruit per day and 16.1% eat the recommended five serves of vegetables, compared with 42% and 9.8% for state averages. Break O’Day residents are eating slightly less fruit but more vegetables in 2013 when compared with 2009. For adults living in Break O’Day 30.2% are obese. Compounding this 22.5% of Break O’Day adults report that their health is poor or fair, compared with 19% for the state average.

While we don’t have results for children at the local government level we do know that rates of overweight and obesity are increasing across Tasmania. The teenage years are particularly significant. Up to 30% of young people across Tasmania are overweight or obese.

Food Security - How easy is it to access healthy food across Break O’Day Council?
Often we hear about people being food insecure across Tasmania. People who are food insecure do not have physical, social and economic access to sufficient, safe and nutritious food that meets their dietary needs and food preferences for an active healthy life. Across Tasmania about 5-10% of the adult population can be described as food insecure. However it is estimated to be as high as 25% in low income households.

The Healthy Food Access Tasmania project is focused on improving physical and economic access to fruit and vegetables in communities across Tasmania. When we think about access to healthy food we think about what is available and where, and how affordable it is? Can all residents easily get to the shops?
**Food Access for Break O'Day Residents**

Across Break O'Day resident’s ability to get to the shops is of course impacted by where shops are located and what transport they may have available to them. Recent research conducted by the University of Tasmania showed that there is wide variety of shops across the Break O'Day Council area. In total there are 5 shops where fresh food such as fruit and vegetables can be purchased. There is 1 major supermarket in St Helens, minor supermarkets (4 – St Helens, Fingal, Scamander and St Marys), no general stores and there is no fruit and vegetables shop. As a general observation, there are 2 shops where fresh fruit and vegetables are available in the areas where the average household income is very low. For people living in these low income areas getting to the shops to purchase healthy food can be difficult. Some low income households do not have access to a car and may also have inadequate access to public transport.

The Beaumaris Swap Market has home grown seasonal fruit and vegetable. The market is held on the 1st and 3rd Sunday of each month throughout summer, between 11am-2pm at the Beaumaris Park in St Helens. The St Helens Hall Market runs every Saturday morning.

**Healthy Food Access Basket Survey – Tasmanian results 2014**

In March and April of 2014 the University of Tasmania, as part of the Healthy Food Access Tasmania project, conducted a price and availability survey for healthy food across Tasmania. The Healthy Food Access Basket survey collected data on 44 foods which are consistent with the Australian Guide to Healthy Eating (AGHE). The AGHE was developed by the Commonwealth Department of Health and provides recommendations for how Australian’s should eat for good health across the lifespan. This survey has been used widely in Australia as measure of the cost of eating well. Data was collected in 142 of Tasmania’s 353 stores where fresh food is available. On page 3 there is a summary of the state wide results contained in Table 1. These results show the range in the price by the different kinds of stores and also the percentage of income required for 4 common household types using Centrelink payments as the income. It shows that the cost of healthy foods vary across store types and the varying impost on the household budget depending on household type. The range of cost of food was determined by the survey results and the calculation for the percentage of income has been made by the Healthy Food Access Tasmania Project. Results from the fruit and vegetables shops are not included here. **These results are preliminary findings only and will be reviewed and updated in September 2014.**

Which residents in Break O'Day may have difficulty accessing healthy food?

In the Break O'Day local government area there are 2,583 households and 6,402 residents. The residents and households who are likely to find it hard to access healthy food are:

- Households with low incomes including residents on Centrelink payments (42% of the local population are Concession Card Holders; 10% unemployed) often have a reduced ability to buy sufficient healthy food as there are many other costs such as housing, transport and utilities which drain the household budget.

- Single parents and their children, particularly if they rely on Centrelink payments. (there are 80 single parent households and 26.5% of children 0-14 are estimated to be living in poverty across the local government area)

- People with a disability or chronic disease (22.5% of adults report their health as fair or poor and 549 residents are receiving the disability support payment) because they may have difficulty carrying shopping and their medical expenses reduce the household food budget.

- Households without a car (7% of households)

- People experiencing housing stress. This is people who have a low income (bottom 40% of income distribution) and who pay more than 30% of their household income on rent or mortgage (20% of local households)

- People living in areas which rely on general stores, or do not have any shops at all within walking distance, limiting their physical access to healthy food.

- People who have inadequate access to public transport.
What can we do about improving access to healthy food for local residents?

While the data about Break O’Day resident’s health and diets may paint a daunting picture, there are some terrific programs and initiatives that are working towards improving outcomes. When these are combined with a systems approach good results can be achieved. Australian research\textsuperscript{16} has shown that when several particular factors occur together, residents are able to eat well even if they have a low income. We call these \textit{resilience factors}, which means people can still eat well despite other challenges.

In order to have the resilience to make healthy food choices easy choices, it is important that a number of the success factors are present in order to give people the support they need. These success factors include:

1. Residents having good personal skills around food preparation, cooking and shopping. Being able to grow some of your own food is also very helpful.

2. Growing up or living in a family or community that values healthy eating and sees it as a ‘normal’ thing to do. This includes eating fruit and vegetables.

3. Importantly, residents must have access to affordable healthy food. This means it must be available in their community or it must be easy to get to where it is available.

Using these success factors we have compiled some of the characteristics of the Break O’Day Local Government area to show how strengthening coordination between these factors, as well as the organisations and/or program activities that are underway, can help contribute towards building a community in which healthy eating is achievable for all.
Linking and coordinating these factors present in the community will contribute towards making healthy food choices easy choices for Break O'Day residents.

Supportive environments influencing healthy food access and supply

- Local supermarkets
- Beaumaris Swap Market (seasonal)
- Retailers and Farmgate sales
  - Meals on wheels and home delivery from the supermarkets and other shops helps ensure people who can’t get to the shops can still get nutritious food
  - Agencies which provide fresh fruit and vegetables as part of their food relief for residents who are food insecure

Individual skills, knowledge to shop, cook, grow and prepare healthy food

Community Houses, Schools and community groups and gardens and other community organisations running programs that teach people to cook, grow food, shop/budget and how to eat well and affordably.

Healthy House- Break O’Day Health Resource Association
Family Food Patch Volunteers

A culture of healthy eating in a variety of community settings

Schools and early childcare centres which are part of the Move Well Eat Well program are working towards children, young people and their families regarding healthy eating as normal and important to achieve.

Some workplaces have health and wellbeing programs which promote healthy eating to their workers.

Healthy catering or food at community events assists people to make healthy food choices more often.

Promoting locally grown food
How can it make a difference when we connect it all together?

Seeing the resilience factors as a ‘system’ and ensuring they are linked to each other can have a positive impact on making healthy food choices easy choices for local residents. For example, if cooking programs use local seasonal produce available in local shops it is easier for people to purchase affordable, healthy food and prepare and eat it. If schools teach children that eating tasty fruit and vegetables are important and ‘normalise’ it, this makes the family meal more enjoyable for the ‘cook’ and the whole family. If shops and markets in neighbourhoods and towns have a ready supply of affordable fruit and vegetables, this makes it easier, even for people on a tight budget to buy it and eat well. If it is locally grown it is also a great boost to the local economy. Making sure that people who need support in times of crisis also receive healthy food such as fruit and vegetables will help them to continue to eat well and maintain their health during challenging times.

Below is a list of the businesses, organisations and groups who have an interest in improving access to healthy food that we are currently aware of.

**Supportive environments influencing healthy food access and supply**

- Emergency Relief Food Agencies including fresh fruit and vegetables provided by SecondBite
- Supermarkets
- Farmgate sales
- Beaumaris Swap Market
- Community Transport

**A culture of healthy eating in a variety of community settings such as schools and early childcare and community meals programs**

- Move Well Eat Well Schools - St Mary’s District High School (both Campus’)
- Move Well Eat Well Early Years Education and Care Centres - Little Penguins Childcare Centre, Poss’m Magic Childcare Centre, St Mary’s Child Care Centre, St Mary’s District School Kindergarten
- Eating with Friends at the St Helen’s Neighbourhood House
- Breakfast programs and accredited school canteens

**Individual skills, knowledge to shop, cook, grow and prepare healthy food**

- Fingal Valley Neighbourhood House, Fingal; St Helen's Neighbourhood House
- Neighbourhood House Community and school gardens
- Family Food Patch Volunteers
- Healthy Families Thriving Community program at St Helens Neighbourhood House
- Healthy House - Break O’ Day Health Resource Association who provide child & parent healthy eating promotion, individual consultations in house & outreach
What can partnership between local government and other important community organisations, businesses and members achieve?

There is no doubt that when the efforts of groups of people are combined and linked together, many of the reasons why people have poor access to healthy food can be resolved. As a guide there are 10 key ways to act\textsuperscript{17}. They are listed below along with examples to explain their importance:

1. Allocate Responsibility – it is key that there is strong leadership and also that the responsibility is shared. Forming a network or coalition to drive change is important.

2. Build the local picture – it is important to understand the local reasons why people have poor access to healthy food by collecting information and speaking with the people who are impacted. This helps to inform future decisions and approaches.

3. Develop Policy and Plans – when you understand the issues, develop a response to bring about change and create a connection between organisations and people who can bring about change together. Make sure you discuss your ideas with the people who you hope will benefit.

4. Set a good example – where you work or live, demonstrate what healthy affordable eating looks like, consider your catering, events or canteen policy to model good behaviour.

5. Use Regulatory and fiscal power – regulation can be used to promote healthy affordable food choices across a variety of locations. As examples, they could positively influence the food sold in community spaces, vending machines, or ensure there are no local laws to prohibit food growing in public spaces.

6. Land use planning – protect land for farming and make sure within townships, land use is mixed-use to support growing food together within open spaces and neighbourhoods.

7. Healthy eating for residents – support training and skill building opportunities through grants programs, and providing access to kitchens in public buildings as a place for education opportunities.

8. Growing food locally – make the connection between what is grown locally and what is available for purchase. This strengthens the local economy and can also apply to home growers who swap and share food.

9. Getting food and residents together – consider that not everybody can jump in the car and get to the shops easily. Work on solutions that get people to food and food to people.

10. Advocacy – get your voice heard. When the issues are well understood, it is important to speak out and make submissions to bring about change.
Healthy Food Access Tasmania

The Healthy Food Access Tasmania project runs until mid 2016. We hope to work with communities and stakeholders from the paddock to plate to increase access to fruit and vegetables, preferably locally grown, in communities across Tasmania. The Healthy Food Access Tasmania project seeks to make healthy food choices easy choices by ensuring that fresh foods (preferably locally grown) are readily available across Tasmania. The project will contribute towards addressing this important health, economic and social objective over the next two years. Healthy Food Access Tasmania is a Tasmania Medicare Local funded project (and will seek to link with Social Determinants of Health projects). The project will be led by the Heart Foundation with the University of Tasmania as a key project partner. We believe the project will have positive health, social and economic benefits for communities across Tasmania.

We encourage communities to consider the important issues raised in this profile and welcome inquiries about how the HFAT project might support your effort to better understand and address local determinants of access to healthy food.

We are committed to Tasmanians in all communities being able to make healthy food choices which are easy choices.

For more information please contact the Healthy Food Access Tasmania Project Manager Leah Galvin 6220 2210 or leah.galvin@heartfoundation.org.au
